Porsche - 1:20

How does it work?

Do you have a beloved car? Do you want to commemorate it?

We take a 3D scan of your car at your location – wherever you're comfortable and the car is located.

Based on the scan, we create tools and produce a model of your personalized car, which we then deliver to your chosen location.

The models are made of special composite GRC or UHPC concrete, which gives them a refined appearance and a timeless presence, while being highly durable and resistant, ensuring their longevity. For demanding customers, we install additional options such as controlled lighting or embellished details with precious metals and stones.

We maintain complete discretion. Each model receives its own certificate and number.

We work worldwide. Models are manufactured in our own factories in our target markets. Limited, proprietary production runs are also possible.
